Anugraha S.B

Bangalore, India

Android & Kotlin Multiplatform (KMP) Engineer with 4+ years of experience delivering scalable, high-performance mobile applications. Proven track record in optimizing app stability, building real-time features, and implementing offline-first architectures.

Work Experience

Android Developer | Kotlin Multiplatform Engineer October 2024 – Present
Chimple Learning (Client: Ustad Mobile) – Bangalore, India (Remote)

Spearheaded the development of a highly scalable, offline-first application architecture using Kotlin Multiplatform (KMP) across Android, Desktop, and Web modules.

Project: Ustad App (Education Platform | Offline-First | KMP)

- Designed and developed a customizable cross-platform reporting system within a Kotlin Multiplatform (KMP) architecture, enabling teachers and administrators to generate interactive data visualizations through configurable x-axis, y-axis, subgrouping, and multiple chart types including bar and line charts.
- Implemented advanced data visualization solutions using KoalaPlot for Android/Desktop and Plotly for Web, ensuring seamless feature parity across platforms.
- Integrated Matomo Analytics with conditional event tracking to support offline-first application workflows, achieving full coverage of critical user journeys and improving product usage insights.
- Optimized bulk folder import and content upload pipelines, reducing processing time by 70% while maintaining backward compatibility with legacy systems.
- Applied MVVM architecture principles with strong testing practices, achieving and sustaining 85% unit test coverage across business logic layers using MockK and JUnit.

Project: Respect App (Education Platform | Android | Web Integration)

- Developed a school registration flow using AndroidX Browser and Chrome Custom Tabs, enabling secure and seamless navigation between Android and Web with safe parameter passing.
- Architected a secure, shared-device authentication framework utilizing QR code scanning, streamlining multi-user transitions on single devices while slashing manual entry by 80%.

Android Developer Feb 2022 - Sep 2024
Perfectzdigital (Client: Cakap, Indonesia) - Bangalore, India (Remote)

Software Engineer position focusing on Kotlin and Jetpack Compose development

Project: Cakap (Education Platform | Android)

- Architected and redesigned real-time virtual classroom infrastructure using Agora RTC and Qiscus Chat SDK, optimizing media streaming, communication workflows, and state management, resulting in a 50% increase in user engagement.
- Engineered adaptive, responsive UI systems across XML and Jetpack Compose for mobile, tablet, and landscape platforms, reducing UI-related defects by 40% and enhancing cross-device user experience.
- Implemented Picture-in-Picture (PiP) functionality for live classes, improving multitasking capabilities and increasing average session duration by 50%.
- Optimized application performance through proactive maintenance, ANR reduction, and crash resolution, achieving 99.9% app stability using Firebase Crashlytics and Google Play Console.
- Enforced Android engineering best practices through code reviews, scalable architecture standards, and SonarQube quality analysis, ensuring maintainable and efficient codebases.
- Led cross-functional squad operations, including sprint planning, task allocation, feature prioritization, and on-time product delivery as Squad Leader.
- Designed and developed a reusable Design System Library (DSL), standardizing UI/UX consistency and accelerating development velocity across product teams.
- Delivered advanced RTC classroom capabilities, including live exercises, emoji reactions, raise-hand interactions, and chat moderation systems to improve classroom engagement and safety.
- Migrated legacy Java applications to Kotlin and modernized XML-based interfaces to Jetpack Compose, improving maintainability, scalability, and UI rendering performance.
- Achieved 80% ViewModel layer unit test coverage and 100% Repository layer coverage using MockK and JUnit, strengthening software reliability.
- Automated critical user journey validation by developing end-to-end UI testing frameworks with Espresso and integrating them into CI/CD pipelines, significantly reducing regression risks.
- Developed and maintained detailed Confluence documentation for sprint reviews, architectural decisions, and technical knowledge sharing, improving team collaboration and onboarding efficiency.

Skills

- **Languages:** Kotlin (Primary), Java
- **Mobile & Cross-Platform**: Android SDK, Kotlin Multiplatform (KMP), Compose Multiplatform, Desktop, Web (MUI)
- **UI & Design Systems:** Jetpack Compose, XML, Material Design 3, Custom UI Components, Theme Management, Animations
- **Architecture & State:** MVVM, Clean Architecture, MVI, Shared ViewModels/Domain, Coroutines, Flow, StateFlow
- **Dependency Injection:** Hilt, Koin (KMP), Dagger 2 Networking & Real-Time: KTOR, Retrofit, OkHttp, WebSockets, Socket.IO, Server-Sent Events (SSE), RTC
- **Jetpack Components & Storage:** Room, DataStore, SQLite, WorkManager, Paging, Navigation, LiveData
- **Testing & Optimization:** MockK, JUnit, Espresso, Android Profiler, ANR Debugging, Crashlytics
- **Tools, CI/CD & Analytics:** Git (GitHub/GitLab), GitHub Actions, Jenkins, Firebase Analytics, Matomo, QR Scanner

Education

- Calicut University, Kerala — Kozhikode,Kerala,India
  Master of Computer Application (MCA) - CGPA: 7.0/10.0 — July 2018 - January 2022

- Calicut University, Kerala — Kozhikode,Kerala,India
  BSC Computer Science (Bsc CS) - CGPA: 6.5/10.0 — June 2015 - March 2018

Awards and Achievements

- Cakap, Indonesia (Remote) Significant Reduction in App Crashes
  - Implemented comprehensive error handling strategies and proactive monitoring tools, achieving a 99.9% reduction in application crashes within six months.
- Hackathon Success
  - Participated in a team-based hackathon focused on AI technologies. Developed an innovative speech assistant feature for the Cakap app, which secured 2nd place out of numerous entries.

Article

- Implementing Server-Sent Events (SSE) in Android with okhttp-eventsource
- Understanding and Implementing Jetpack Compose Animation in Android Apps
- Implementing Network Speed Test Using Socket.IO in Android
